Amendment in Reply to Office Action mailed on December 12, 2005

IN THE TITLE

Please delete the current title in its entirety and substitute
therefore the following new title --REFLECTOR LAMP WITH A PARTIALLY
REFLECTIVE BURNER--

PATENT

Serial No. 10/507,182

Amendment in Reply to Office Action mailed on December 12, 2005

IN THE SPECIFICATION

Please amend the specification as follows:

Replace the paragraph on page 3, between lines 12-17 of the specification with the following:

These and other objects are ~~is achieved, according to claim 1,~~
by means of a reflector lamp with a light source, a main or secondary reflector, and at least one primary reflector which is provided for an at least substantial reflection through the light source onto the main reflector of those light portions originating from the light source which propagate in the direction of optically inactivated regions of the main reflector or regions of the main reflector obscured by other objects.

Delete the paragraph on page 4, between lines 8-9 of the specification.

Replace the paragraph on page 4, between lines 8-9 of the specification with the following:

Replace the paragraph on page 4, between lines 10-11 of the

PATENT

Amendment in Reply to Office Action mailed on December 12, 2005

specification with the following:

~~Claims 2 and 3 relate to~~ Further advantageous included
eliminating adverse influences of the optically inactivated regions
or other objects whose adverse influences may be preferably
eliminated.

Replace the paragraph on page 4, between lines 12-13 of the
specification with the following:

~~The primary reflectors as defined in claims 4 and 5 can~~ may be
manufactured in a particularly simple, effective, and inexpensive
manner.

Replace the paragraph on page 4, between lines 14-17 of the
specification with the following:

~~The embodiments of claims 6 and 7 render~~ Other advantages
include rendering possible a particularly high degree of
miniaturization of the reflector lamp ~~according to the invention,~~
which while the embodiment of claim 8 may be used to particular
advantage in projection applications because of the intensity and
composition of the radiated light.
